

MapStar Compass Module

- The MapStar Compass Module is the companion to the Impulse Laser Rangefinder, enabling determination of accurate azimuths, which, with range and inclination from the Impulse, allows rapid and accurate offsets to be determined for GPS or non-GPS mapping applications.
- Calibration in the field takes less than a minute, with a steady audio tone to guide you as you rotate the compass 360 degrees.
- Built in "Missing Line" feature: automatically calculates the distance between two remote targets.
- Reconfigure factory defaults from your PC: Set parameters in the office and toggle to your personal configuration in the field.
- Audible and visual indicators: assist in the aiming and leveling process
