

MobileMapper Beacon

Bluetooth-Enabled Wireless Differential Correction Receiver

- Mobile Mapper Beacon improves the real-time positioning accuracy of GPS receivers by providing DGPS correction.
- Provides access to standard RTCM SC-104 DGPS corrections broadcast by beacon networks around the world.
- It can be easily connected to your GPS receiver using the integrated Bluetooth wireless technology or the included serial cable.
- Powered by four standard AA batteries and conveniently worn in a belt-mounted carrying case, Mobile Mapper Beacon provides flexible, reliable and powerful hands-free performance.
- The result is significantly improved positioning accuracy, less than one metre, without the need for post processing.
